

WHAT IS AN ALL ON X RESTORATION?

An All on X restoration means replacement of all teeth of a jaw with X number of implants. X could be 4,5,6,7 or 8 implants depending on the type of restoration.

The other name of all on x is ***FULL ARCH RESTORATION***.

When a patient doesn't have any teeth or all the teeth patient has are planned for extraction, we have to provide a restoration which can replace all the teeth. Depending on how many teeth need to be replaced and available bone, we decide the number of implants necessary.

If the condition is favorable we can extract teeth, place implants and place a temporary fixed teeth, ***all on same day***.
