

WHAT IS A GUIDED SURGERY?

Implants can be placed with the help of a guide to place them at a precise location in your jaw bone.

We use data from a CT scan and Intra Oral scan to plan the placement of implants on computer. Where we can see the bone in 3 Dimension and make sure that the implant is placed in most desirable location. We use this information to fabricate a 3D printed guide. This guide is placed in patients mouth, and instrument are used through the guide to create ideal site of implants followed by ideal placement of implant.
