

WHAT IS INTRA ORAL SCANNING

It is a digital way of taking impression.

It has following advantages:

- We don't have to take impressions with uncomfortable impression materials.
- We can scan slow and little area at a time. So patient doesn't have to stay open throughout the process.
- It will not lose accuracy during handling, transportation and temperature change
- It can be sent to lab in seconds like an email.
- We can see it on a computer screen with a magnified view
- We can save it for as long as we want.
